

Release 2020.0.8

Improvements

- Publishing tables to InfoZoom Anywhere Server 2.2 is now supported.

Bugfixes

- Loading data from Excel files no longer causes a critical error.
- Information about Excel data sources are now deleted completely on reimporting.

Release 2020.0.7

Bugfixes

- CodeMeter runtime 7.10a is now being shipped with the InfoZoom Desktop installers.
- Fox files can only be saved in file formats of the three last former versions of InfoZoom Desktop.
- Extremely small double values are no longer interpreted as undefined values but as 0.

Release 2020.0.6

Improvements

- The Bundesliga sample table was updated.
- Publishing tables to InfoZoom Anywhere Servers now supports OAuth2 authentication. However OAuth2 authentication is currently not available in the InfoZoom command line interface .

Bugfixes

- Reloading data from Access files no longer causes a critical error.
- Composite keys can now be used when importing FOX files va the Database wizard.
- Clicking the „Refresh“ button in the „Select Product Variant“ dialog no longer increases the amount of available licenses.
- If multiple tables are displayed side by side none gets clipped at the right edge.
- When using the InfoZoom command line interface for reloading data from Excel files dialogs no longer pop up if command line parameter `-invisible` is used.

Release 2020.0.3

Improvements

- It is now possible to publish InfoZoom tables to an InfoZoom Anywhere Server version 2.1.
- Automatic checks for license updates can now be managed via a new registry key `CheckForLicenseUpdates`. The default value is 1 (TRUE). Setting the value to 0 (FALSE) deactivates the functionality.

Release 2020.0.2

Improvements

- The ip addresses of license servers are now displayed for all network licenses.
- In the dialog *Product Variant Selection* only those named user licenses are displayed a user is authorized for.
- In the dialog *Product Variant Selection* the product descriptions are now the same that are used in the license web depot.
- Defining the background color of attributes is now also available in InfoZoom Desktop Business, InfoZoom Desktop OEM and proALPHA Analyzer.
- List&Label reports can now be exported as xlsx files via the command line.

Bugfixes

- Fox files can now be imported via the database assistant again.
- In the database assistant manually created joins between tables are no longer overwritten by automatically discovered relations between tables.
- The InfoZoom command line interface can now be used in Windows tasks again.
- The number of older file formats available when saving files is now equal when using the command line or using InfoZoom interactively.
- The correct version number of List&Label is now displayed in the info box.

Release 2020.0.1

Improvements

- InfoZoom Desktop 2020 released. Further information about the new features can be found in the document *Whats_New_en_rtf*.
