Release 2021.0.4

Optimizations

- Replacement actions no longer affect hidden attributes.

Bug Fixes

- Excel reports created on the basis of list attributes now explicitly use Text as Excel format.
- Attributes can now also be coupled above the invisible attributes for data source and data import.
- The OEM variant no longer encounters a critical error when a database data source has been configured.

Release 2021.0.3

Optimizations

- Case differentiations: cases referring to "INF" (infinite) are no longer suggested. This happened with numeric attributes that only have illegal values. Letters are now used as range limits in such cases.

Bug Fixes

- When an attribute is redefined, the dependent, recalculated, derived attributes are now always updated in the table view.
- Navigating the Infoscape using the arrow keys no longer deletes cell contents.
- Access to SAP databases now also works if only access to views is allowed.
- Defining a classification on an empty quantity (operator IN) no longer leads to a critical runtime error.

Release 2021.0.2

Improvements

- Visual C++ Runtime 14.28.29325.2 is now installed together with InfoZoom Desktop 2021.

Release 2021.0.1

Improvements

- InfoZoom Desktop 2021 released. Further information about the new features can be found in the document *Whats_New_en.rtf*.
